Modular kit system for stainless steel multiple connectors

Eisele MULTILINE E combines all important operating media for processing machines

Eisele Connector's MULTILINE E modular kit system for stainless steel multiple connectors sets high standards for tool and format changes in food processing and packaging machines. The perfectly compatible modular design allows flexible integration of different tube diameters, connection types and media in one multiple connector. MULTILINE E can also be used for electrical and electronic connections.

Eisele Connectors presents this pioneering concept for connecting functional groups to food processing and packaging machines on September 19 to 22, 2017 at the PROCESS EXPO in Chicago, IL. This completely modular kit system with adaptive inserts ensures that the connections required for a particular application in food processing and packaging can be combined in one multiple connector. Whether during system installation, maintenance or repairs: this innovation can significantly reduce installation expense and set-up times. Since all single components are mutually compatible, this system is much more advanced than previous solutions.

Due to the modular principle, connections for pneumatics, vacuum, gases, coolants, fluids and even push-in connectors for electric and electronic cables can be combined into a single interface. All parts are manufactured from stainless steel and the seals are fully FDA-compliant, which makes MULTILINE E suitable for food processing and packaging machines. The size of the connections is variable and shut-off functions are available for connecting and disconnecting lines under pressure. An easy to handle locking lever enables superfast connection and disconnection within seconds. This quick-change system also requires less manual force, making it very convenient to operate a MULTILINE E multiple connector that is completely equipped with drip-free adaptive inserts.

EISELE CONNECTORS at PROCESS EXPO, North Hall, Booth 2852

About Eisele Connectors:

Eisele Connectors Inc. is a subsidiary of Eisele Pneumatics GmbH & Co. KG, which emerged from a German company founded in 1939. With more than 75 years of experience in precision machining, Eisele is one of the world's leading suppliers for high quality all-metal connectors and customized connector solutions.

Drawing from the company's proven German manufacturing expertise; Eisele's North American facility keeps an ample stock of products and can optimally supply its customers and respond quickly to fulfill needs. The company is part of a global logistics network that

Meta-Title:

Modular kit system for stainless steel multiple connectors

Meta-Description:

MULTILINE E: This modular and hygienic kit system for stainless steel multiple connectors allows you to integrate the most important operating media for food processing machines.

Keywords:

MULTILINE E, food processing machines, packaging machines, multiple connector, stainless steel, modular kit system, food industry, packaging industry, connection components, adaptive inserts, drip-free
